## 6 Summary

7 **Data Science for Psychologists (DS4P)** is an open, GitHub-hosted computational learning  
8 module developed to support data science instruction within psychology. Initially launched as a  
9 graduate course during the COVID-19 pandemic, DS4P will expand to include undergraduate  
10 instruction beginning in Spring 2026 at Wake Forest University.

11 This multimedia module serves as a flipped textbook, combining embedded video lectures,  
12 annotated code examples, readings, slide decks, and hands-on labs. Its instructional approach  
13 emphasizes reproducibility and transparency in psychological research. No prior programming  
14 or advanced mathematical background is assumed.

15 DS4P makes extensive use of the R ecosystem
